### **DETAILED ACTION**

1. The amendment filed February 2, 2007 is entered and claims 1-28 are pending.

#### ***Allowable Subject Matter***

2. Claims 1 to 28 are allowed.
3. The following is an examiner's statement of reasons for allowance: the claimed invention is directed to a method enabling selective viewing.

Independent claim 1 identifies a uniquely distinct feature "viewing said display screen using a viewing device, said viewing device being selectively operable for blocking a view of said predetermined viewing areas during said obscuration, said blocking being effected at said predetermined frequency whereby said designated information as viewed through said viewing device appears un-obscured to a user looking through said viewing device".

Independent claim 14 identifies a uniquely distinct feature "viewing said display screen using a viewing device, said viewing device being selectively operable for blocking a view of said predetermined viewing areas during said obscuration, said blocking being effected at said predetermined frequency whereby said designated information as viewed through said viewing device appears un-obscured to a user looking through said viewing device, said obscuration comprising an overlaying of predetermined decoy information in said predetermined viewing areas".

Independent claim 15 identifies a uniquely distinct feature “providing blocking signals for application to a viewing device, said viewing device being selectively operable for blocking a view of said predetermined viewing areas during said obscuration, said blocking being effected at said predetermined frequency whereby said designated information as viewed through said viewing device appears un-obscured to a user looking through said viewing device”.

Independent claim 26 identifies a uniquely distinct feature “providing blocking signals for application to a viewing device, said viewing device being selectively operable for blocking a view of said predetermined viewing areas during said obscuration, said blocking being effected at said predetermined frequency whereby said designated information as viewed through said viewing device appears un-obscured to a user looking through said viewing device, said obscuration comprising an overlaying of predetermined decoy information in said predetermined viewing areas”.

Independent claims 27 and 28 identify a uniquely distinct feature “said viewing device being selectively operable for blocking a view through said viewing device of said predetermined viewable areas during said obscuration, said blocking being effected at said predetermined frequency whereby said designated information as viewed through said viewing device appears un-obscured to a user looking through said viewing device, said system being further operable for accomplishing an authentication process before enabling said blocking, said authentication process comprising receiving input from a user to insure that said user is authorized to use said viewing device”.

The closest arts, Vossler, Tettington, Perlman, and Lazzaro as discussed in the previous Office action, either singularly or in combination, fail to anticipate or render obvious the above limitations obvious.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
